1. Platformization

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 1 with examples from contemporary media systems and the debates they have generated among scholars.

News organisations increasingly depend on platforms for distribution, which shifts power over visibility from editors to platform companies. This point is developed further on page 1 with examples from contemporary media systems and the debates they have generated among scholars.

Agenda setting is the process by which news coverage influences which issues the public considers important. This point is developed further on page 1 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 1 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 2 with examples from contemporary media systems and the debates they have generated among scholars.

Unlike editorial gatekeeping, algorithmic curation is optimised for signals such as engagement, and its criteria are rarely transparent. This point is developed further on page 2 with examples from contemporary media systems and the debates they have generated among scholars.

Framing is the selection and emphasis of certain aspects of an issue to promote a particular interpretation. This point is developed further on page 2 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 2 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 3 with examples from contemporary media systems and the debates they have generated among scholars.

David Manning White (1950) studied how a wire editor chose stories for publication. This point is developed further on page 3 with examples from contemporary media systems and the debates they have generated among scholars.

Priming is the effect by which media coverage makes some criteria more salient when people evaluate leaders. This point is developed further on page 3 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 3 with examples from contemporary media systems and the debates they have generated among scholars.

2. Mediatization

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 4 with examples from contemporary media systems and the debates they have generated among scholars.

Political communication changes because parties adapt their messages to media logic. This point is developed further on page 4 with examples from contemporary media systems and the debates they have generated among scholars.

Filter bubble is a state of informational isolation produced by personalised recommendation systems. This point is developed further on page 4 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 4 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 5 with examples from contemporary media systems and the debates they have generated among scholars.

Traditional accountability theory often assumes Western institutional structures and overlooks hybrid media environments. This point is developed further on page 5 with examples from contemporary media systems and the debates they have generated among scholars.

Echo chamber is an environment in which people encounter only beliefs that amplify their own. This point is developed further on page 5 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 5 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 6 with examples from contemporary media systems and the debates they have generated among scholars.

News organisations increasingly depend on platforms for distribution, which shifts power over visibility from editors to platform companies. This point is developed further on page 6 with examples from contemporary media systems and the debates they have generated among scholars.

Network effects is the increase in a platform's value as more users join it. This point is developed further on page 6 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 6 with examples from contemporary media systems and the debates they have generated among scholars.

3. Algorithmic curation

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 7 with examples from contemporary media systems and the debates they have generated among scholars.

Unlike editorial gatekeeping, algorithmic curation is optimised for signals such as engagement, and its criteria are rarely transparent. This point is developed further on page 7 with examples from contemporary media systems and the debates they have generated among scholars.

Datafication is the transformation of social action into quantified data that can be tracked and analysed. This point is developed further on page 7 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 7 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 8 with examples from contemporary media systems and the debates they have generated among scholars.

David Manning White (1950) studied how a wire editor chose stories for publication. This point is developed further on page 8 with examples from contemporary media systems and the debates they have generated among scholars.

Surveillance capitalism is an economic logic that turns behavioural data into predictions sold to advertisers. This point is developed further on page 8 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 8 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 9 with examples from contemporary media systems and the debates they have generated among scholars.

Political communication changes because parties adapt their messages to media logic. This point is developed further on page 9 with examples from contemporary media systems and the debates they have generated among scholars.

Content moderation is the screening and removal of user content according to platform rules. This point is developed further on page 9 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 9 with examples from contemporary media systems and the debates they have generated among scholars.

4. Media accountability

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 10 with examples from contemporary media systems and the debates they have generated among scholars.

Traditional accountability theory often assumes Western institutional structures and overlooks hybrid media environments. This point is developed further on page 10 with examples from contemporary media systems and the debates they have generated among scholars.

Platform governance is the rules and enforcement practices through which platforms regulate user activity. This point is developed further on page 10 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 10 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 11 with examples from contemporary media systems and the debates they have generated among scholars.

News organisations increasingly depend on platforms for distribution, which shifts power over visibility from editors to platform companies. This point is developed further on page 11 with examples from contemporary media systems and the debates they have generated among scholars.

Media literacy is the ability to access, analyse, evaluate and create media messages. This point is developed further on page 11 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 11 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 12 with examples from contemporary media systems and the debates they have generated among scholars.

Unlike editorial gatekeeping, algorithmic curation is optimised for signals such as engagement, and its criteria are rarely transparent. This point is developed further on page 12 with examples from contemporary media systems and the debates they have generated among scholars.

Public sphere is a space in which citizens discuss matters of common concern and form public opinion. This point is developed further on page 12 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 12 with examples from contemporary media systems and the debates they have generated among scholars.

5. Gatekeeping

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 13 with examples from contemporary media systems and the debates they have generated among scholars.

David Manning White (1950) studied how a wire editor chose stories for publication. This point is developed further on page 13 with examples from contemporary media systems and the debates they have generated among scholars.

Cultivation theory is the idea that long-term television exposure shapes viewers' perceptions of social reality. This point is developed further on page 13 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 13 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 14 with examples from contemporary media systems and the debates they have generated among scholars.

Political communication changes because parties adapt their messages to media logic. This point is developed further on page 14 with examples from contemporary media systems and the debates they have generated among scholars.

Uses and gratifications is an approach that studies why audiences actively choose particular media. This point is developed further on page 14 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 14 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 15 with examples from contemporary media systems and the debates they have generated among scholars.

Traditional accountability theory often assumes Western institutional structures and overlooks hybrid media environments. This point is developed further on page 15 with examples from contemporary media systems and the debates they have generated among scholars.

Two-step flow is the model in which media influence passes through opinion leaders to wider publics. This point is developed further on page 15 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 15 with examples from contemporary media systems and the debates they have generated among scholars.

6. Platformization (2)

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 16 with examples from contemporary media systems and the debates they have generated among scholars.

News organisations increasingly depend on platforms for distribution, which shifts power over visibility from editors to platform companies. This point is developed further on page 16 with examples from contemporary media systems and the debates they have generated among scholars.

Spiral of silence is the tendency of people to stay quiet when they believe their view is in the minority. This point is developed further on page 16 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 16 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 17 with examples from contemporary media systems and the debates they have generated among scholars.

Unlike editorial gatekeeping, algorithmic curation is optimised for signals such as engagement, and its criteria are rarely transparent. This point is developed further on page 17 with examples from contemporary media systems and the debates they have generated among scholars.

Hybrid media system is an environment in which older and newer media logics interact and compete. This point is developed further on page 17 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 17 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 18 with examples from contemporary media systems and the debates they have generated among scholars.

David Manning White (1950) studied how a wire editor chose stories for publication. This point is developed further on page 18 with examples from contemporary media systems and the debates they have generated among scholars.

Attention economy is a market in which human attention is treated as a scarce resource to be captured. This point is developed further on page 18 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 18 with examples from contemporary media systems and the debates they have generated among scholars.

7. Mediatization (2)

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 19 with examples from contemporary media systems and the debates they have generated among scholars.

Political communication changes because parties adapt their messages to media logic. This point is developed further on page 19 with examples from contemporary media systems and the debates they have generated among scholars.

Native advertising is paid content designed to match the form and style of the surrounding editorial content. This point is developed further on page 19 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 19 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 20 with examples from contemporary media systems and the debates they have generated among scholars.

Traditional accountability theory often assumes Western institutional structures and overlooks hybrid media environments. This point is developed further on page 20 with examples from contemporary media systems and the debates they have generated among scholars.

Disinformation is false information spread deliberately to deceive. This point is developed further on page 20 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 20 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 21 with examples from contemporary media systems and the debates they have generated among scholars.

News organisations increasingly depend on platforms for distribution, which shifts power over visibility from editors to platform companies. This point is developed further on page 21 with examples from contemporary media systems and the debates they have generated among scholars.

Misinformation is false information spread without intent to deceive. This point is developed further on page 21 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 21 with examples from contemporary media systems and the debates they have generated among scholars.

8. Algorithmic curation (2)

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 22 with examples from contemporary media systems and the debates they have generated among scholars.

Unlike editorial gatekeeping, algorithmic curation is optimised for signals such as engagement, and its criteria are rarely transparent. This point is developed further on page 22 with examples from contemporary media systems and the debates they have generated among scholars.

Remediation is the representation of one medium within another. This point is developed further on page 22 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 22 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 23 with examples from contemporary media systems and the debates they have generated among scholars.

David Manning White (1950) studied how a wire editor chose stories for publication. This point is developed further on page 23 with examples from contemporary media systems and the debates they have generated among scholars.

Convergence culture is the flow of content across multiple platforms and the migratory behaviour of audiences. This point is developed further on page 23 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 23 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 24 with examples from contemporary media systems and the debates they have generated among scholars.

Political communication changes because parties adapt their messages to media logic. This point is developed further on page 24 with examples from contemporary media systems and the debates they have generated among scholars.

Participatory culture is a culture with low barriers to artistic expression and strong support for sharing creations. This point is developed further on page 24 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 24 with examples from contemporary media systems and the debates they have generated among scholars.

9. Media accountability (2)

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 25 with examples from contemporary media systems and the debates they have generated among scholars.

Traditional accountability theory often assumes Western institutional structures and overlooks hybrid media environments. This point is developed further on page 25 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic bias is systematic errors in automated systems that produce unfair outcomes for some groups. This point is developed further on page 25 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 25 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 26 with examples from contemporary media systems and the debates they have generated among scholars.

News organisations increasingly depend on platforms for distribution, which shifts power over visibility from editors to platform companies. This point is developed further on page 26 with examples from contemporary media systems and the debates they have generated among scholars.

Agenda setting is the process by which news coverage influences which issues the public considers important. This point is developed further on page 26 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 26 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 27 with examples from contemporary media systems and the debates they have generated among scholars.

Unlike editorial gatekeeping, algorithmic curation is optimised for signals such as engagement, and its criteria are rarely transparent. This point is developed further on page 27 with examples from contemporary media systems and the debates they have generated among scholars.

Framing is the selection and emphasis of certain aspects of an issue to promote a particular interpretation. This point is developed further on page 27 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 27 with examples from contemporary media systems and the debates they have generated among scholars.

10. Gatekeeping (2)

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 28 with examples from contemporary media systems and the debates they have generated among scholars.

David Manning White (1950) studied how a wire editor chose stories for publication. This point is developed further on page 28 with examples from contemporary media systems and the debates they have generated among scholars.

Priming is the effect by which media coverage makes some criteria more salient when people evaluate leaders. This point is developed further on page 28 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 28 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 29 with examples from contemporary media systems and the debates they have generated among scholars.

Political communication changes because parties adapt their messages to media logic. This point is developed further on page 29 with examples from contemporary media systems and the debates they have generated among scholars.

Filter bubble is a state of informational isolation produced by personalised recommendation systems. This point is developed further on page 29 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 29 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 30 with examples from contemporary media systems and the debates they have generated among scholars.

Traditional accountability theory often assumes Western institutional structures and overlooks hybrid media environments. This point is developed further on page 30 with examples from contemporary media systems and the debates they have generated among scholars.

Echo chamber is an environment in which people encounter only beliefs that amplify their own. This point is developed further on page 30 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 30 with examples from contemporary media systems and the debates they have generated among scholars.

11. Platformization (3)

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 31 with examples from contemporary media systems and the debates they have generated among scholars.

News organisations increasingly depend on platforms for distribution, which shifts power over visibility from editors to platform companies. This point is developed further on page 31 with examples from contemporary media systems and the debates they have generated among scholars.

Network effects is the increase in a platform's value as more users join it. This point is developed further on page 31 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 31 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 32 with examples from contemporary media systems and the debates they have generated among scholars.

Unlike editorial gatekeeping, algorithmic curation is optimised for signals such as engagement, and its criteria are rarely transparent. This point is developed further on page 32 with examples from contemporary media systems and the debates they have generated among scholars.

Datafication is the transformation of social action into quantified data that can be tracked and analysed. This point is developed further on page 32 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 32 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 33 with examples from contemporary media systems and the debates they have generated among scholars.

David Manning White (1950) studied how a wire editor chose stories for publication. This point is developed further on page 33 with examples from contemporary media systems and the debates they have generated among scholars.

Surveillance capitalism is an economic logic that turns behavioural data into predictions sold to advertisers. This point is developed further on page 33 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 33 with examples from contemporary media systems and the debates they have generated among scholars.

12. Mediatization (3)

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 34 with examples from contemporary media systems and the debates they have generated among scholars.

Political communication changes because parties adapt their messages to media logic. This point is developed further on page 34 with examples from contemporary media systems and the debates they have generated among scholars.

Content moderation is the screening and removal of user content according to platform rules. This point is developed further on page 34 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 34 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 35 with examples from contemporary media systems and the debates they have generated among scholars.

Traditional accountability theory often assumes Western institutional structures and overlooks hybrid media environments. This point is developed further on page 35 with examples from contemporary media systems and the debates they have generated among scholars.

Platform governance is the rules and enforcement practices through which platforms regulate user activity. This point is developed further on page 35 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 35 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 36 with examples from contemporary media systems and the debates they have generated among scholars.

News organisations increasingly depend on platforms for distribution, which shifts power over visibility from editors to platform companies. This point is developed further on page 36 with examples from contemporary media systems and the debates they have generated among scholars.

Media literacy is the ability to access, analyse, evaluate and create media messages. This point is developed further on page 36 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 36 with examples from contemporary media systems and the debates they have generated among scholars.

13. Algorithmic curation (3)

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 37 with examples from contemporary media systems and the debates they have generated among scholars.

Unlike editorial gatekeeping, algorithmic curation is optimised for signals such as engagement, and its criteria are rarely transparent. This point is developed further on page 37 with examples from contemporary media systems and the debates they have generated among scholars.

Public sphere is a space in which citizens discuss matters of common concern and form public opinion. This point is developed further on page 37 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 37 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 38 with examples from contemporary media systems and the debates they have generated among scholars.

David Manning White (1950) studied how a wire editor chose stories for publication. This point is developed further on page 38 with examples from contemporary media systems and the debates they have generated among scholars.

Cultivation theory is the idea that long-term television exposure shapes viewers' perceptions of social reality. This point is developed further on page 38 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 38 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 39 with examples from contemporary media systems and the debates they have generated among scholars.

Political communication changes because parties adapt their messages to media logic. This point is developed further on page 39 with examples from contemporary media systems and the debates they have generated among scholars.

Uses and gratifications is an approach that studies why audiences actively choose particular media. This point is developed further on page 39 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 39 with examples from contemporary media systems and the debates they have generated among scholars.

14. Media accountability (3)

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 40 with examples from contemporary media systems and the debates they have generated among scholars.

Traditional accountability theory often assumes Western institutional structures and overlooks hybrid media environments. This point is developed further on page 40 with examples from contemporary media systems and the debates they have generated among scholars.

Two-step flow is the model in which media influence passes through opinion leaders to wider publics. This point is developed further on page 40 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 40 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 41 with examples from contemporary media systems and the debates they have generated among scholars.

News organisations increasingly depend on platforms for distribution, which shifts power over visibility from editors to platform companies. This point is developed further on page 41 with examples from contemporary media systems and the debates they have generated among scholars.

Spiral of silence is the tendency of people to stay quiet when they believe their view is in the minority. This point is developed further on page 41 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 41 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 42 with examples from contemporary media systems and the debates they have generated among scholars.

Unlike editorial gatekeeping, algorithmic curation is optimised for signals such as engagement, and its criteria are rarely transparent. This point is developed further on page 42 with examples from contemporary media systems and the debates they have generated among scholars.

Hybrid media system is an environment in which older and newer media logics interact and compete. This point is developed further on page 42 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 42 with examples from contemporary media systems and the debates they have generated among scholars.

15. Gatekeeping (3)

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 43 with examples from contemporary media systems and the debates they have generated among scholars.

David Manning White (1950) studied how a wire editor chose stories for publication. This point is developed further on page 43 with examples from contemporary media systems and the debates they have generated among scholars.

Attention economy is a market in which human attention is treated as a scarce resource to be captured. This point is developed further on page 43 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 43 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 44 with examples from contemporary media systems and the debates they have generated among scholars.

Political communication changes because parties adapt their messages to media logic. This point is developed further on page 44 with examples from contemporary media systems and the debates they have generated among scholars.

Native advertising is paid content designed to match the form and style of the surrounding editorial content. This point is developed further on page 44 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 44 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 45 with examples from contemporary media systems and the debates they have generated among scholars.

Traditional accountability theory often assumes Western institutional structures and overlooks hybrid media environments. This point is developed further on page 45 with examples from contemporary media systems and the debates they have generated among scholars.

Disinformation is false information spread deliberately to deceive. This point is developed further on page 45 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 45 with examples from contemporary media systems and the debates they have generated among scholars.

16. Platformization (4)

Participatory culture is a culture with low barriers to artistic expression and strong support for sharing creations. This point is developed further on page 49 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 49 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 50 with examples from contemporary media systems and the debates they have generated among scholars.

Traditional accountability theory often assumes Western institutional structures and overlooks hybrid media environments. This point is developed further on page 50 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic bias is systematic errors in automated systems that produce unfair outcomes for some groups. This point is developed further on page 50 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 50 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 51 with examples from contemporary media systems and the debates they have generated among scholars.

News organisations increasingly depend on platforms for distribution, which shifts power over visibility from editors to platform companies. This point is developed further on page 51 with examples from contemporary media systems and the debates they have generated among scholars.

Agenda setting is the process by which news coverage influences which issues the public considers important. This point is developed further on page 51 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 51 with examples from contemporary media systems and the debates they have generated among scholars.

18. Algorithmic curation (4)

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 52 with examples from contemporary media systems and the debates they have generated among scholars.

Unlike editorial gatekeeping, algorithmic curation is optimised for signals such as engagement, and its criteria are rarely transparent. This point is developed further on page 52 with examples from contemporary media systems and the debates they have generated among scholars.

Framing is the selection and emphasis of certain aspects of an issue to promote a particular interpretation. This point is developed further on page 52 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 52 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 53 with examples from contemporary media systems and the debates they have generated among scholars.

David Manning White (1950) studied how a wire editor chose stories for publication. This point is developed further on page 53 with examples from contemporary media systems and the debates they have generated among scholars.

Priming is the effect by which media coverage makes some criteria more salient when people evaluate leaders. This point is developed further on page 53 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 53 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 54 with examples from contemporary media systems and the debates they have generated among scholars.

Political communication changes because parties adapt their messages to media logic. This point is developed further on page 54 with examples from contemporary media systems and the debates they have generated among scholars.

Filter bubble is a state of informational isolation produced by personalised recommendation systems. This point is developed further on page 54 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 54 with examples from contemporary media systems and the debates they have generated among scholars.

19. Media accountability (4)

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 55 with examples from contemporary media systems and the debates they have generated among scholars.

Traditional accountability theory often assumes Western institutional structures and overlooks hybrid media environments. This point is developed further on page 55 with examples from contemporary media systems and the debates they have generated among scholars.

Echo chamber is an environment in which people encounter only beliefs that amplify their own. This point is developed further on page 55 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 55 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 56 with examples from contemporary media systems and the debates they have generated among scholars.

News organisations increasingly depend on platforms for distribution, which shifts power over visibility from editors to platform companies. This point is developed further on page 56 with examples from contemporary media systems and the debates they have generated among scholars.

Network effects is the increase in a platform's value as more users join it. This point is developed further on page 56 with examples from contemporary media systems and the debates they have generated among scholars.

Platformization refers to the penetration of the infrastructures, economic processes and governance frameworks of digital platforms into different sectors of society. This point is developed further on page 56 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 57 with examples from contemporary media systems and the debates they have generated among scholars.

Unlike editorial gatekeeping, algorithmic curation is optimised for signals such as engagement, and its criteria are rarely transparent. This point is developed further on page 57 with examples from contemporary media systems and the debates they have generated among scholars.

Datafication is the transformation of social action into quantified data that can be tracked and analysed. This point is developed further on page 57 with examples from contemporary media systems and the debates they have generated among scholars.

Algorithmic curation is the automated ranking and filtering of content by software. This point is developed further on page 57 with examples from contemporary media systems and the debates they have generated among scholars.

20. Gatekeeping (4)

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 58 with examples from contemporary media systems and the debates they have generated among scholars.

David Manning White (1950) studied how a wire editor chose stories for publication. This point is developed further on page 58 with examples from contemporary media systems and the debates they have generated among scholars.

Surveillance capitalism is an economic logic that turns behavioural data into predictions sold to advertisers. This point is developed further on page 58 with examples from contemporary media systems and the debates they have generated among scholars.

Gatekeeping is the process by which editors and journalists select which events become news. This point is developed further on page 58 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 59 with examples from contemporary media systems and the debates they have generated among scholars.

Political communication changes because parties adapt their messages to media logic. This point is developed further on page 59 with examples from contemporary media systems and the debates they have generated among scholars.

Content moderation is the screening and removal of user content according to platform rules. This point is developed further on page 59 with examples from contemporary media systems and the debates they have generated among scholars.

Mediatization is the process through which media increasingly shape institutions, practices and social interaction. This point is developed further on page 59 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 60 with examples from contemporary media systems and the debates they have generated among scholars.

Traditional accountability theory often assumes Western institutional structures and overlooks hybrid media environments. This point is developed further on page 60 with examples from contemporary media systems and the debates they have generated among scholars.

Platform governance is the rules and enforcement practices through which platforms regulate user activity. This point is developed further on page 60 with examples from contemporary media systems and the debates they have generated among scholars.

Media accountability is the set of processes through which media organisations answer to the public for their conduct. This point is developed further on page 60 with examples from contemporary media systems and the debates they have generated among scholars.
